

**Supplementary Table S9.** Overall infection status of *Metagonimus* spp. metacercariae in freshwater fish from Banbyeon-cheon in Yeongyang-gun, Gyeongsangbuk-do, Korea

| Fish species infected             | No. of fish examined | Prevalence (%) | No. of DTM detected |                 |
|-----------------------------------|----------------------|----------------|---------------------|-----------------|
|                                   |                      |                | Total               | Average (range) |
| <i>Acheilognathus lanceolatus</i> | 32                   | 5 (15.6)       | 10                  | 2 (1–5)         |
| <i>Acheilognathus majusculus</i>  | 12                   | 1 (8.3)        | 1                   | 1               |
| <i>Nipponocypris temminckii</i>   | 35                   | 2 (5.7)        | 28                  | 9 (1–26)        |
| <i>Pungtungia herzi</i>           | 50+1                 | 3 (6)          | 10                  | 3.3 (1–2)       |
| <i>Pseudogobio esocinus</i>       | 5                    | 1 (20)         | 26                  | 26              |
| <i>Zacco platypus</i>             | 51                   | 1 (1.9)        | 1                   | 1               |
| Total                             | 186                  | 13 (6.9)       | 76                  | 5.8 (1–26)      |
